LOBO Lasers Latest

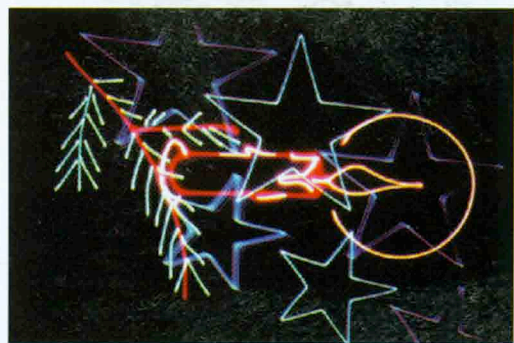

German laser giant, LOBO proved to be the highlight of the **Photokina 94** held at Cologne. Under the headline 'Media World' spared nothing as they used 2D and 3D laser animations as well as slide projection onto three screens. With the largest booth (1400 sq.m), they had almost 1000 visitors for each of their 15 minute shows held at every hour. A special attraction was their new Water Screen and the updated SCS-1 software for their Lacon-3 laser animation computer. Making their first appearance was their Economy Line lasershow player system which consist of a laser graphics projector and the EPU-3T player unit. Last christmas LOBO surprised all their system users with a custom dsigned animated Christmas show.
